model: $\sigma = A\,(W - W_{\rm th})^{\alpha}\,e^{-B(W - W_{\rm th})}$
CLAS12 (Chatagnon et al. 2026), stat and stat⊕syst
$A = 1.018$ nb, $\alpha = 0.707$, $B = -0.928$ GeV^{-1}
$\sigma_{\rm tot}(\gamma p \to J/\psi p)$ [nb]
E_γ [GeV]
model at $\langle E_\gamma \rangle$ = 8.91 GeV
model at $\langle E_\gamma \rangle$ = 9.67 GeV
model at $\langle E_\gamma \rangle$ = 10.27 GeV
CLAS12, E_γ in [8.2, 9.28] GeV
CLAS12, E_γ in [9.3, 10.00] GeV
CLAS12, E_γ in [10.0, 10.60] GeV
$d\sigma/dt = \sigma_{\rm tot}\, b\, e^{b t'}$, $b = 1.67$ GeV^{-2}
$d\sigma/dt$ [nb/GeV^2]
$-t$ [GeV^2]
