free-neutron
threshold
8.20 GeV
deuteron, $\gamma n \to J/\psi n$ with Fermi motion (AV18)
neutron at rest, same photon flux
yield per 100 MeV [nb × photons/e]
E_γ [GeV]
same, without the flux factor $(1-\beta_z)$: binding only
±1 %
mean above 8.6 GeV: 0.9944 ± 0.0003
Fermi on / Fermi off, 100 MeV bins
yield ratio Fermi on / Fermi off
E_γ [GeV]
